

NEW AND EMERGING TECHNOLOGIES COVERAGE STATUS

New and emerging medical procedures, medications, treatments and technologies are often prescribed by physicians and/or marketed to the public before governmental agency approval, evidence based guidelines and positions of leading national health professional organizations or research is available in the peer reviewed literature to document efficacy, safety, and long term positive outcomes. New technologies are reviewed by the New Technologies and Operational Criteria (NTOC) committee and Health Services department, and a recommendation is made regarding PacificSource coverage based upon then available literature reviews, standards of care and coverage, consultations with advisors and experts as needed, and other authoritative sources, as well as PacificSource group and individual contracts. Procedures are written when necessary to outline and clarify coverage criteria. Because of the changing nature of medicine, this list is subject to revision and update without notice. This document is designed for informational purposes only and is not an authorization or contract. Coverage determinations are made on a case-by-case basis and subject to the terms, conditions, limitations, and exclusions of the member's policy.

If you have any questions about coverage for the procedures listed below, you are welcome to contact our Health Services Department at (541) 684-5584 or toll free at (888) 691-8209.
